Your unit AC indicator is flashing when turned on indicates a bad AC overload circuit. There are 2 service options available. Please select from one of the 2 below:

Select a Repair Option:

\$25, Repair AC overload circuit

\$45, Upgrade AC overload circuit

It will be necessary to modify the outside of the case.

Owners Signature acknowledging that this is a repair of the AC overload protection circuit. No other unit functionality will be tested. So if your DC input or Outputs or other features are not working, this does not fix that! 30-day warranty on all services. **Owner is responsible for all shipping cost.**
